

Ondo Finance: (\$ONDO)

Fund: UMBF

Investment Presentation

Pitch Team: Amit Kopolovic, Charan Vijay

March 2026

Ondo Overview

Ondo Finance is a financial technology company focused on the tokenization of real-world assets, including U.S. Treasuries, stocks, and ETFs, bringing institutional-grade financial products onto public blockchains. Ondo transforms traditionally passive assets into programmable instruments that enable 24/7 trading, near-instant settlement, and the ability to use tokenized securities directly as collateral. Its native token, ONDO, serves as the governance and ecosystem token for the Ondo Foundation and its protocol suite, operating primarily as an ERC-20 asset across Ethereum, Solana, and BNB Chain.

Token Price	\$0.25
Fully Diluted Market Cap	\$2.7 B
Circulating Market Cap	\$1.3 B
All Time Volume	\$154.7 B
Total Value Locked	\$2.3 B
Token Turnover (Circulating)	2.8%

Short-Term Catalysts

Major token unlock already absorbed

- Circulating supply increased ~50% in Jan 2026 without price collapse, signaling strong market demand.

Rapid product growth

- TVL surpassed \$2.5B, making Ondo the largest provider of tokenized U.S. Treasuries and equities.

Market leadership

- Ondo commands roughly 60% share of tokenized equities liquidity.

Product pipeline expansion

- Upcoming launches like Ondo Perps and Ondo Chain could drive new institutional use cases.

Long-Term Thesis

Tokenization of Global Capital Markets:

- Ondo is positioned as the core infrastructure for the \$225T migration of equities, ETFs, and Treasuries onto blockchain technology

Intuitional Integration

- Ondo's tokenized treasury OUSG is backed by BlackRock's BUIDL and partnerships with JPMorgan and Mastercard anchor Ondo within tradfi infrastructure

Capital Efficiency

- Multi-Asset collateral and programmable securities allow institutions to reuse assets as collateral while maintaining exposure

Compliance-First mindset

- SEC aligned structure positions Ondo for mass institutional adoption

*“Public blockchain technology and DeFi could solve the many limitations traditional financial systems suffer from”
- Ian De Bode*

The Problem : Legacy Inefficiencies

Slow T+2 Settlement: Multi-day clearing cycles trap trillions in unproductive "settlement gaps"
High Intermediary Costs: Layers of brokers and clearinghouses add heavy fees and operational friction
Restricted Trading: Markets close on weekends, creating dangerous liquidity gaps for global participants
Capital Drag: Traders must sell assets for stablecoins to post margin, wasting potential investment upside

The Solution: Wall Street 2.0

Instant Settlement : Replaces T+2 with 24/7 atomic settlement, removing counterparty risk
Direct Execution: RFQ-based model bypasses middlemen to deliver tokens at live market prices
Programmable Collateral: Deploy tokenized shares directly as margin without ever liquidating positions
Universal Access: Borderless infrastructure provides global access to institutional-grade U.S. assets

Market Opportunity

Massive Addressable Market

Global capital markets exceed \$225 trillion, including equities, bonds, ETFs, and money market instruments moving toward tokenization.

Rapid Sector Growth

The tokenized real-world asset (RWA) market has grown to over \$24 billion, representing 266% year-over-year growth.

Key Assets Moving On-Chain

U.S. Treasuries and institutional credit currently dominate the tokenized RWA market. However, public equities represent one of the fastest growing segments, creating a major opportunity for platforms enabling on-chain trading

Total RWA Value Per Sector (\$M)

Total RWA Market Value (\$B)

Current Adoption & Institutional Integration

“Regulated institutions have long desired more purpose-built infrastructure... The Ondo Chain is an innovation that has the potential to help move institutions and capital markets on-chain” – McKinsey & Company Head of Digital Assets, Matt Higgins

Institutional Partnerships

- OUSG backed by BlackRock’s BUIDL Fund, bringing institutional grade U.S Treasuries on-chain
- Integrations with JPMorgan’s digital asset infrastructure and Mastercard's Multi-Token Network, connecting tokenized assets with traditional financial settlement systems

Distribution & Accessibility

- Integrated with MetaMask and major exchanges including Binance expanding global access to tokenized assets
- Supports multi-chain asset mobility across nine blockchains, including Ethereum, Solana, etc, which increases liquidity and user reach

Platform Traction

- \$2.3 B TVL as of early 2026
- \$9B+ cumulative trading volume through Ondo Global Markets
- Roughly 60% market share in tokenized equities, making Ondo the dominant platform in the sector

TVL Growth

Team Quality & Management

Justin Schmidt

President

Justin directs institutional digital asset strategy and leads the protocols focus on building regulatory compliant infrastructure

Prior experience:

- Head of Digital Asset Markets at Goldman Sachs

Ian De Bode

CSO

Ian architects the protocols strategy path from tokenized assets to on-chain prime brokerage, leading the launch of Ondo Perps

Prior experience:

- Partner & Head of Digital Assets at McKinsey & Company

Nathan Allman

Founder & CEO

Founded Ondo Finance to bridge traditional capital markets and blockchain technology by pioneering institutional grade tokenization

Prior experience:

- Digital Assets – Global Markets & GS accelerate at Goldman Sachs

Protocol Overview

TVL Breakdown by Asset Class (\$M)

USDY & OUSG

Legal & Custodial Layer

BlackRock BUIDL, SEC-registered broker-dealers, and bankruptcy-remote SPVs

Infrastructure Layer

Smart Contracts, Compliance Hooks (KYC/AML), and **Chainlink Oracles** for real-time pricing

User Layer (DeFi)

OUSG/USDY in wallets, **Ondo Perps** trading, and cross-chain bridging

Core Product Suite:

- **Tokenized Equities:** 24/7 on-chain access to over 200 U.S. stocks and ETFs (e.g., AAPL, NVDA, QQQ) with inherited exchange liquidity.
- **Ondo Perps:** A revolutionary platform allowing users to trade perpetual futures on equities using their tokenized spot assets as **capital-efficient collateral**.
- **OUSG (Ondo Short-Term U.S. Govt Bond Fund):** Institutional-grade exposure to U.S. Treasuries, backed by the **BlackRock BUIDL** fund.
- **USDY (U.S. Dollar Yield):** A yield-bearing stablecoin alternative backed by short-term Treasuries and bank deposits

Technology & Execution Model

Request-For-Quote(RFQ) Model

- Trades executed through a Request-For-Quote model rather than liquidity pools
- Quotes reference liquidity from traditional exchanges like NASDAQ and NYSE

Inherits liquidity from traditional markets instead of recreating it on-chain

Tokenized Asset Structure

- Real securities held in traditional custody via SPVs
- Smart contracts issue and redeem tokenized assets
 - Tokens represent direct exposure to underlying equities or Treasuries

Blockchain layer mirrors ownership while custody remains institutional

Infrastructure & Interoperability

On-Chain Infrastructure

- Chainlink price feeds provide secure market pricing
- Integrates with wallets like MetaMask and DeFi protocols

Tokenized assets can move across ecosystems while referencing real-world prices

Ondo combines traditional market liquidity with blockchain settlement, enabling institutional-scale trading of tokenized assets

Strategic Defensibility

Inherited Liquidity

- RFQ execution against live NASDAQ depth offers best institutional liquidity

Regulatory Superiority

- Registered by the SEC and cleared reviews creates a localized monopoly

Institutional Lock-In

- Technical and legal fusions with partners like BlackRock and JPMorgan create high switching costs

Network Flywheel

- Huge integrations across Binance, MetaMask, etc. drives a flywheel of utility and capital

“With an early mover advantage and an RWA ecosystem to support distribution, Ondo might succeed.”

Competitive Landscape

Coin	Ticker	Price	TVL (\$B)	Fully Diluted Market Cap (\$B)	Circulating Market Cap (\$B)	Active Addresses (Monthly)	Trading Volume LTM (\$B)
Ondo	ONDO	\$ 0.26	\$ 2.30	\$ 2.50	\$ 1.20	15,400	\$ 56.30
RWA's							
Pendle	PENDLE	\$ 1.31	\$ 2.20	\$ 0.37	\$ 0.22	26,100	\$ 28.20
Maple	SYRUP	\$ 0.24	\$ 1.97	\$ 0.28	\$ 0.27	4	\$ 17.30
Centrifuge	CFG	\$ 0.12	\$ 1.40	\$ 0.08	\$ 0.07	32	\$ 1.10
Chainlink	LINK	\$ 8.97	\$ 62.62	\$ 8.98	\$ 6.36	60,100	\$ 635.00
Plume	PLUME	\$ 0.01	\$ 0.03	\$ 0.09	\$ 0.05	192	\$ 17.70

Token Utility

Token Allocation

■ Allocations ■ Ecosystem Growth ■ Protocol Development ■ Private Sales ■ Community Sales (ICO)

Token Unlocks by %

Unlock & Dilution Dynamics

Remaining tokens unlock gradually through 2029

- creates predictable supply schedule rather than sudden inflation events

As vesting concludes, the token enters a phase of declining dilution pressure, which can improve supply-demand dynamics over time.

Ondo is transitioning from an early distribution phase

Supply Overview

Max Supply: 10 Billion ONDO
Circulating Supply (2026): ~4.9B
~50% of total supply is already circulating following the January 2026 unlock
- improves market liquidity

Allocation Overview

Ecosystem Growth: incentivizes designed to fund partnerships, and protocol expansion.
Remaining allocations: support core contributors and early investors,

Risks & Mitigants

01

Regulatory Risk

Evolving SEC stances on tokenized securities could restrict U.S. market access.

Mitigant

Ondo prioritizes compliance through SEC-registered entities to ensure bank-grade survival.

01

02

Technical Risk

Vulnerabilities in smart contracts or Layer 1 failures could compromise institutional trust.

Mitigant

The upcoming Ondo Chain is optimized specifically for institutional security and TradFi compatibility.

02

03

Competitive Risk

Traditional giants like BlackRock or JPMorgan could vertically integrate and bypass Ondo's infrastructure.

Mitigant

Deep institutional lock ins and months of technical integration make switching to a rival irrational.

03

04

Dilution Risk

Persistent supply overhang from 4.9B circulating tokens toward a 10B max cap through 2029.

Mitigant

If platform adoption and liquidity grow faster than supply, that dilution can be absorbed by market demand

04

Investment Recommendation

We believe Ondo is undervalued as it sits 88% below its all-time highs of December 2024. Ondo is positioned at the forefront of the 225 trillion-dollar migration of TradFi assets to Onchain rails, positioning itself as a core liquidity and settlement layer for tokenized equities, Treasuries, and ETFs. Due to substantial token unlocks in the coming years, Ondo's inflection point may not arrive until 2029 or later, but we believe that after the unlock schedule completes Ondo's price will reflect their dominant market share in the multi-trillion-dollar RWA tokenization industry.

Position: **Long**

Time Horizon:
Long-Term Hold
